

# Hygienic Design Bulk Bag Vibrator

## BULK BAG VIBRATOR FEATURES

- ◆ All 304 stainless steel construction
- ◆ Designed to fully support all size bulk bags
- ◆ Rigid, open construction
- ◆ Efficient electric vibrator cycles manually or automatically
- ◆ Air mounts isolate vibration from load cells
- ◆ All vibration energy is transferred to bulk bag contents
- ◆ Split stainless covers completely seal inlet when bulk bag is removed
- ◆ Integrates with Quick Connect™ bulk bag spout capture
- ◆ Pinch bars aid in hookup

The Semi-Bulk Systems Bulk Bag Vibrator mechanism was specifically developed by Semi-Bulk Systems to address the discharge of difficult powders. Just as conventional bulk bag hoppers proved to be functionally inadequate to supply the VACUCAM® Ejector Mixer, typical bulk bag unloaders could not efficiently discharge the bag contents. Our bulk bag vibrating unloader efficiently loosens clumped powders for complete and rapid discharge from the bag. The vibrating assembly can be coupled to any capacity bulk bag unloading system we manufacture.
